and most outdoor sports.

STATEMENT:

Our State constitutions mandates that democratically elected
representatives craft laws and make budget decisions. I am
deeply committed to preserving this form of government and
making it serve our citizens well.

Alaska's economy is driven by Natural Resources such as oil,
gas, minerals, forest products, and fish. I have made the
responsible development and utilization of those resources my
highest priority, and I will continue to do so. My work in the oil and
fishing industries has been useful.

I hoped that we could expand the Alaska economy and grow our
way out of the current financial deficit. It now appears we will
neither get a gas pipeline nor explore for oil in ANWR in the near
future. If world oil prices do not improve, there will have to be
more streamlining and reduction in State spending and
consideration of other State revenue sources. I will not support a
State income tax, and I will continue to protect the Permanent
Fund and the dividend program.

Protecting families and children is very important to me, and I
have worked to revise Alaska's child and family protection laws
and to improve the work of State agencies that have jurisdiction.
More work is needed, and I will continue efforts to make our
homes and children safe and healthy.

My staff and I will continue working to make State government
serve the people of Alaska and assisting citizens in our district as
they deal with local and state government.
